**ONE**

---

## **DENY ALL WAF**

Deny All WAF aggregates and normalizes Deny All WAF events and enables you to analyze Deny All WAF data through the *LP\_Deny All Web Application Firewall* dashboard. The dashboard visualizes incident details for web attack source addresses, countries and other event details detected in your network. You can customize it to perform in-depth analysis by changing the data used in a search.

When Logpoint identifies threats, malware or malicious events with a potential risk, it triggers security alerts based on predetermined rules. The automated alert enables you to detect potential threats, malware or malicious events early and take corrective actions against them.

Deny All WAF enables you to collect and analyze Deny All WAF logs.

### **Supported Device/Source**

- DenyAll Web Application Firewall v6.x

### **Deny All WAF components**

#### **1. Compiled Normalizer**

- LP\_Deny All Web Application Firewall

#### **2. Alert Package**

- LP\_DenyAllWAF SQL Injection Attack

---

CHAPTER  
**TWO**

---

## **INSTALLING DENY ALL WAF**

### **Prerequisite**

Logpoint v7.0.0 or later

### **To install Deny All WAF:**

1. Download the .pak file from the [Help Center](#).
2. Go to *Settings >> System Settings* from the navigation bar and click **Applications**.
3. Click **Import**.
4. **Browse** to downloaded .pak file.
5. Click **Upload**.

After installing Deny All WAF, you can find it under *Settings >> System Settings >> Plugins*.

---

CHAPTER  
**THREE**

---

## **UNINSTALLING DENY ALL WAF**

You must remove the **Deny All WAF** configurations to delete it.

1. Go to *Settings >> System Settings* from the navigation bar and click **Applications**.
2. Click the **Uninstall** icon from **Actions**.
3. Click **Yes**.

## CONFIGURING DENY ALL WAF

### 4.1 Adding a Normalization Policy for Deny All WAF

1. Go to *Settings >> Configuration* from the navigation bar and click **Normalization Policies**.
2. At the top left, click **Add**.
3. Enter a **Policy Name**.
4. In **Compiled Normalizers**, select *Deny All WAF*.
5. Click **Submit**.

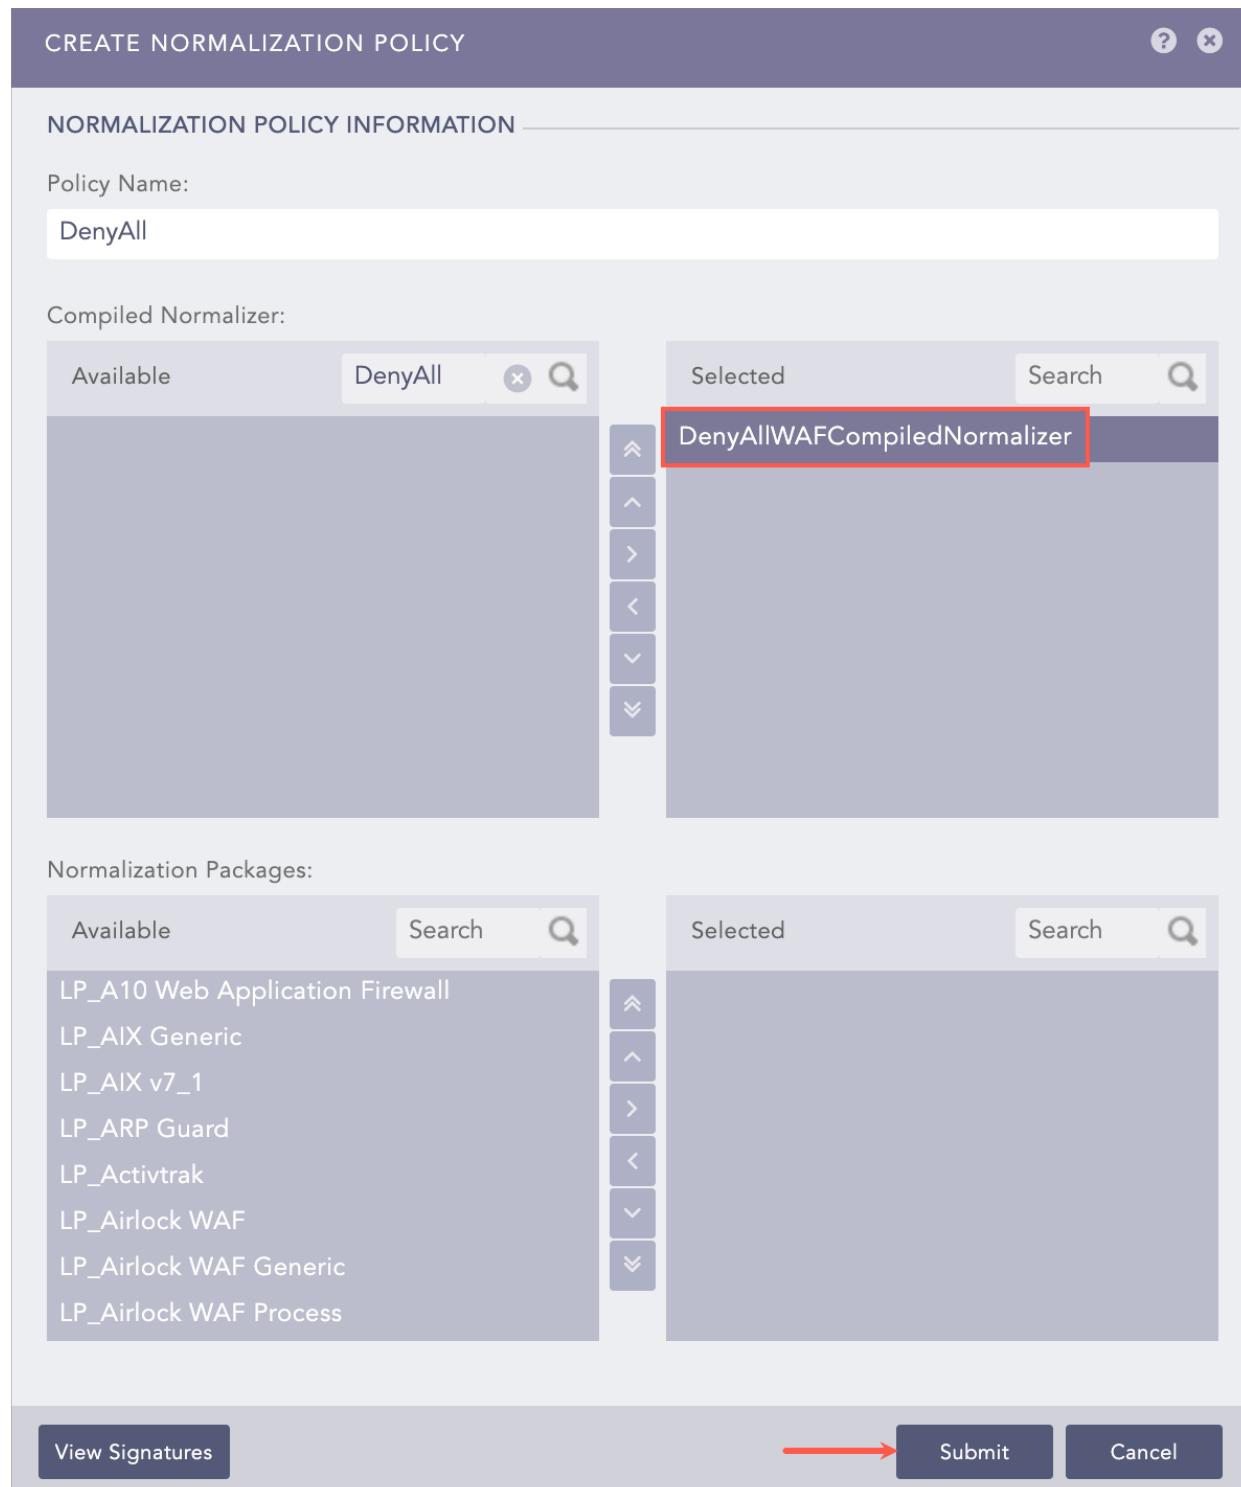

Fig. 1: Adding a Normalization Policy

## 4.2 Adding Deny All WAF as a Device in Logpoint

1. Go to *Settings >> Configuration* from the navigation bar and click **Devices**.
2. At the top left, click **Add**.
3. Enter a device **Name**.
4. Enter the **IP address(es)** of the *Deny All WAF* server.
5. Select the **Device Groups**.
6. Select an appropriate **Log Collection Policy** for the logs.
7. Select a collector or a forwarder from the **Distributed Collector** drop-down menu.

---

**Note:** It is optional to select the **Device Groups**, the **Log Collection Policy** and the **Distributed Collector**.

---

8. Select a **Time Zone**. The timezone of the device must be the same as its log source.
9. Configure the **Risk Values** for **Confidentiality**, **Integrity** and **Availability** used to calculate the risk levels of the alerts generated from the device.
10. Click **Submit**.

CREATE DEVICE

DEVICE INFORMATION

Name: DenyAll

IP address(es): 2.2.2.2

Device Groups: windows

Log Collection Policy: DenyAll

Distributed Collector:

Time Zone: UTC TimeZone

RISK VALUES

Confidentiality: Minimal

Integrity: Minimal

Availability: Minimal

Fig. 2: Adding Deny All WAF as a Device

## 4.3 Configuring the Syslog Collector for Deny All WAF

1. Go to *Settings >> Configuration* from the navigation bar and click **Devices**.
2. Search for the previously added device.
3. Click the **Add** icon from **Actions**.
4. Click **Syslog Collector** on **AVAILABLE COLLECTORS FETCHERS**.

AVAILABLE COLLECTORS FETCHERS			
Adhoc OPSEC Fetcher	CIFS Fetcher	FTP Collector	FTP Fetcher
0	0	0	0
Mitel Fetcher	ODBC Fetcher	OPSEC Fetcher	Oracle Fetcher
0	0	0	0
SCP Fetcher	SCP Fetcher Lite	SDEE Fetcher	SFlow Collector
0	0	0	0
Snare Collector	SNMP Fetcher	SNMP Trap Collector	Syslog Collector
0	0	0	0
Syslog Forwarder File Fetcher	Vulnerability Management	WMI Fetcher	
0	0	0	

Fig. 3: Available Collectors Fetchers Panel

5. Select **Syslog Parser** as **Parser**.
6. Select a **Processing Policy** that uses the previously created *normalization policy*.
7. Select the **Charset**.
8. In **Proxy Server**, select **None**
9. Click **Submit**.

## DENY ALL WAF ANALYTICS

### 5.1 Deny All WAF Dashboard

#### 5.1.1 LP\_Deny All Web Application Firewall Dashboard

Widgets available in the dashboard *LP\_Deny All Web Application Firewall* provide:

Widget Name	Description
Top 10 Source Address	Where a packet of data originated on a network so the firewall can determine whether the packet followed firewall rules.
Top 10 Firewall Rule	Entails the instructions used by the firewall to handle incoming, forwarding and outgoing traffic.
Firewall Request Rejection Reason	The source IP address's connection request refused for reasons being unknown hostname, path traversal or directory traversal.
Firewall Request Rejection - list	Entails all the rejected source addresses with reasons, uniform resource identifier (URI) and messages.
Top 10 Messages	The top 10 messages in network traffic inspected and authenticated before they are allowed to move to a more secure environment.
Top 10 Sources in SQL Injection Attack	The top ten compromised source IP addresses with an intent of SQL Injection Attack to manipulate backend database for accessing confidential information.
Top 10 Countries in SQL Injection Attack	The location of a source IP address with which the SQL Injection Attack originated.
SQL Injection Details	Entails sources IP address with SQL Injection, compromised url routes, threat type, country, log timestamp, action and function used for injection.

## 5.2 Adding the Deny All WAF Dashboard

1. Go to **Settings >> Knowledge Base** from the navigation bar and click **Dashboard**.
2. Select **VENDOR DASHBOARD** from the drop-down.
3. Click the **Use** icon from **Actions**.

The screenshot shows the DenyAll Knowledge Base interface with the 'VENDOR DASHBOARD' selected. A list of five dashboard widgets is displayed, each with a 'Used' status and a red arrow pointing to the 'Actions' column where the 'Use' icon is located.

- 1 LP\_Deny All Web Application Firewall
- 2 Top 10 Source Address
- 3 Top 10 Firewall Rule
- 4 Firewall Request Rejection Reason
- 5 Firewall Request Rejection - list
- 6 Top 10 Messages

Fig. 1: Adding the Deny All WAF Dashboard

4. Click **Choose Repos**.

The screenshot shows the 'ASK REPOS' dialog box. It displays a list of repositories with 'LP\_Deny All Web Application Firewall' selected. A red arrow points to the 'Choose Repos' button. A note at the bottom states: 'Note: Using all repos in all the widgets of all dashboards may hit on performance'.

Fig. 2: Selecting Repos

5. Select the repo and click **Done**.

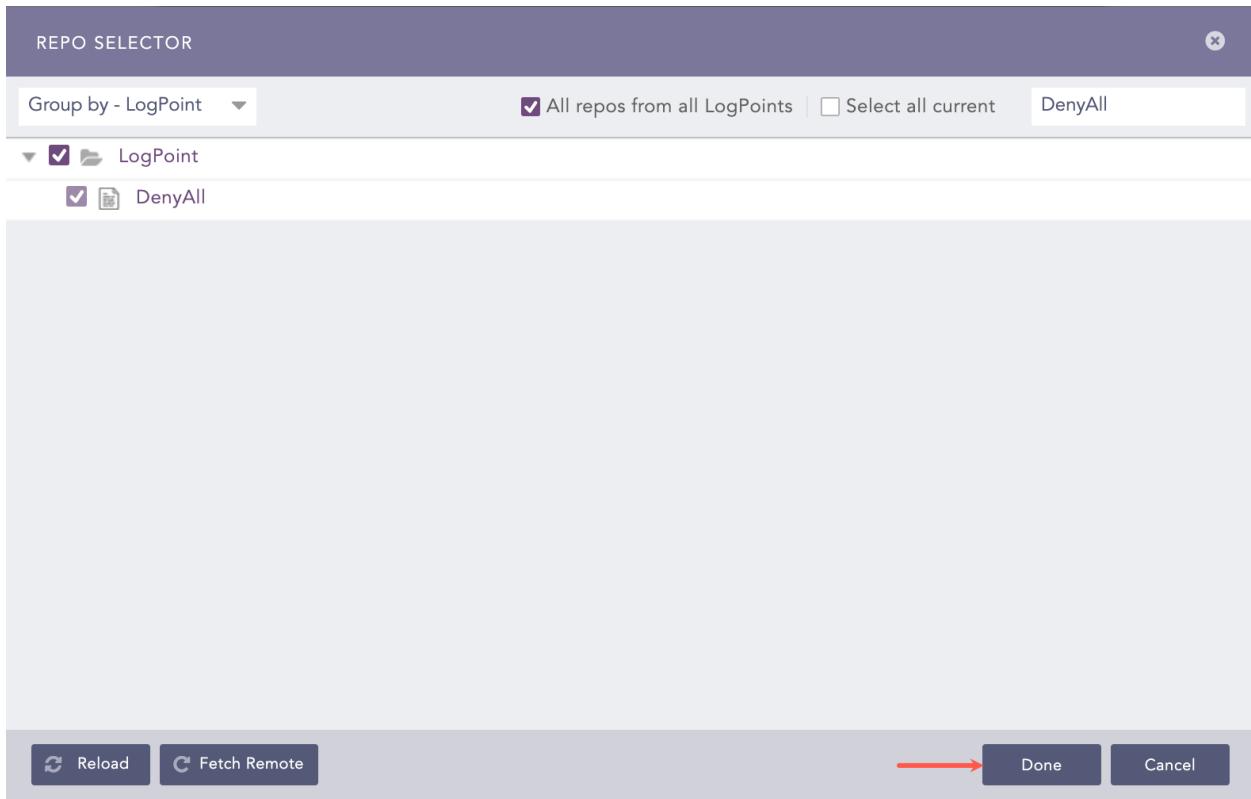

Fig. 3: Selecting Repos

6. Click **Ok**.

You can find the Deny All WAF dashboard under **Dashboards**.

Fig. 4: Deny All WAF Dashboard

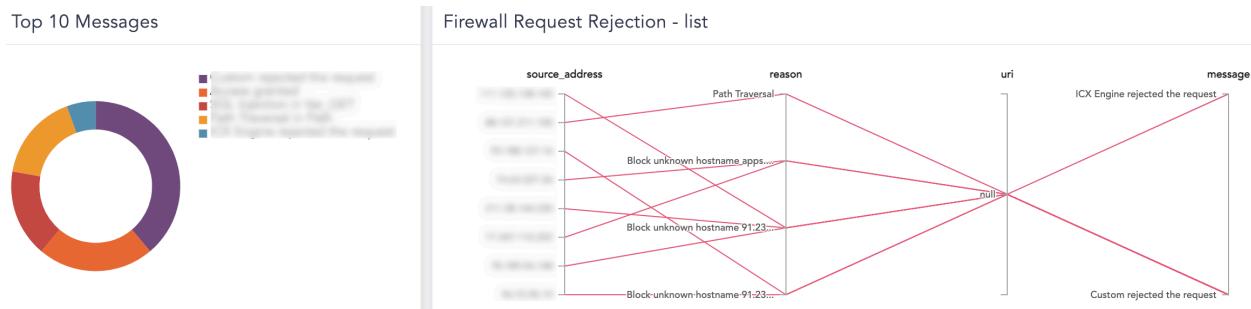

Fig. 5: Deny All WAF Dashboard

## 5.3 Deny All WAF Alert

### 5.3.1 DenyAllWAF SQL Injection Attack

- **Trigger condition:** A SQL injection attack is detected.
- **ATT&CK Category:** Initial Access
- **ATT&CK Tag:** Exploit Public-Facing Application
- **ATT&CK ID:** T1190
- **Minimum Log Source Requirement:** DenyAll WAF
- **Query:**

norm\_id=DenyAllWAF label=SQL label=Injection

## EXPECTED LOG SAMPLES

### 6.1 Deny All WAF
