SAML AUTHENTICATION

SAML Authentication enables you to log into Logpoint using the SAML Identity Providers (IdPs). You can also implement *Azure Active Directory* multi factor authentication using SAML. Go to [Configuring SAML Authentication in Microsoft Azure Portal](#) for details.

You can use it to configure any SAML IdPs that are SAML v2 compliant, including:

1. Microsoft's Active Directory Federation Services (ADFS)
2. OneLogin
3. IdentityServer4
4. Shibboleth
5. Ping Identity
6. CyberArk
7. Ilex

INSTALLING SAML AUTHENTICATION

Prerequisite

Logpoint v7.0.0 or later

To install SAML Authentication:

1. Download the .pak file from the [Help Center](#).
2. Go to *Settings >> System Settings* from the navigation bar and click **Applications**.
3. Click **Import**.
4. **Browse** to the downloaded .pak file.
5. Click **Upload**.

After installing SAML Authentication, you can find it under *Settings >> System Settings >> Plugins*.

UNINSTALLING SAML AUTHENTICATION

1. Go to *Settings >> System Settings* from the navigation bar and click **Applications**.
2. Click the **Uninstall** (🗑️) icon in **Actions**.
3. Click **Yes**.

CONFIGURING SAML AUTHENTICATION

To implement *Azure Active Directory* using *SAML*, you must first configure *SAML* in Microsoft Azure Portal and then configure SAML Authentication in Logpoint.

4.1 Configuring SAML Authentication in Microsoft Azure Portal

To implement *Azure Active Directory* using *SAML*, first you need to:

1. *Add Azure AD SAML Toolkit*
2. *Creating User Account*
3. *Assign the User Account to an Enterprise Application*
4. *Enable SAML*

in the Microsoft Azure Portal and then *configure SAML Authentication in Logpoint* .

4.1.1 Adding Azure AD SAML Toolkit

1. Go to the [Microsoft Azure Portal](#) and log in with your credentials.
2. Go to **Azure Active Directory** from the navigation bar and click **Enterprise applications**.
3. Click **All applications** and **+ New application**.
4. Search and click **Azure AD SAML Toolkit**.
5. Click **Create**.

Fig. 1: Adding Azure AD SAML Toolkit

4.1.2 Creating User Account

1. Go to **Azure Active Directory** from the navigation bar of Microsoft Azure Portal and click **Users**.
2. Click the **+ New user** drop-down and click **Create a new user**.
3. Enter the users information and click **Review + create**.
4. Click **Create**.

Fig. 2: Creating a New User

4.1.3 Assigning the User Account to an Enterprise Application

1. Go to **Azure Active Directory** from the navigation bar of Microsoft Azure Portal and click **Enterprise applications**.
2. Click the previously added **Azure AD SAML Toolkit**.

3. Go to **Users and groups** from the navigation bar and click **+ Add user/group**.

Fig. 3: Adding User/Group

4. Click **None selected** under **Users and groups**.

5. Search for the user or group to assign to the application and select it.

6. Click **Select** and then **Assign**.

4.1.4 Enabling SAML

1. Go to **Azure Active Directory** from the navigation bar of Microsoft Azure Portal and click **Enterprise applications**.

2. Click the previously added **Azure AD SAML Toolkit**.

3. Go to **Single sign-on** from the navigation bar and click **SAML**.

Fig. 4: Enabling SAML

4. Click the edit icon of **Basic SAML Configuration**.
5. Click **Add reply URL** and enter `https://samltoolkit.azurewebsites.net/SAML/Consume`.
6. In **Sign on URL**, enter `https://samltoolkit.azurewebsites.net/`.
7. Click **Save**.

Basic SAML Configuration

  Got feedback?

Reply URL (Assertion Consumer Service URL) * ⓘ

The reply URL is where the application expects to receive the authentication token. This is also referred to as the "Assertion Consumer Service" (ACS) in SAML.

	Index	Default
Add reply URL Patterns: https://samltoolkit.azurewebsites.net/SAML/Consume	https://samltoolkit.azurewebsites.net/SAML/Consume ✓	☐ ⓘ 

Sign on URL *

Sign on URL is used if you would like to perform service provider-initiated single sign-on. This value is the sign-in page URL for your application. This field is unnecessary if you want to perform identity provider-initiated single sign-on.

* ✓

Patterns: https://samltoolkit.azurewebsites.net/

Fig. 5: Adding URL

8. Note down the value of **Identifier (Entity ID)** of **Basic SAML Configuration**. You must enter it as **Issuer (EntityID)** while *configuring* SAML Authentication in Logpoint.
9. Search and **Download** the Certificate (Base64) of **SAML Signing Certificate**. You must enter it as **X.509 Certificate** while *configuring* SAML Authentication in Logpoint.
10. Note down the **Login URL** and **Azure AD Identifier** of Set up Azure AD SAML Toolkit. You must enter **Login URL** as **SSO EndPoint URL** and **Azure AD Identifier** as **EntityID** while configuring SAML Authentication in Logpoint.

4.2 Configuring SAML Authentication in Logpoint

The time zones of the IdP server and Logpoint must be identical.

1. Go to *Settings >> System Settings* from the navigation bar and click **Plugins**.
2. Find **SAML Authentication** and click **Manage**.

Fig. 6: Manage SAML Authentication

3. Click **ADD SERVER**.

Fig. 7: Add SAML Server

4. Enter a unique **Server Name**.
5. In **Issuer (EntityID)**, enter the Logpoint's IP address. You must add these Issuer (EntityID) and ACS (Consumer) URL in your IdP server. For Shibboleth, you must download the [Logpoint metadata file](#) and upload it in its server.
SAML Authentication generates the **ACS (Consumer) URL** automatically.
6. Enter the **EntityID**. You can find it in your IdP metadata file as **entity ID**.
7. Enter the **SSO EndPoint URL**. You can find it in your IdP metadata file as **Location** in **SingleSignOnService**. The **SingleSignOnService** must be **HTTP-POST**.
8. Enter the **X.509 Certificate**. You can find it in your IdP metadata file as the signing certificate. For Shibboleth, you can find it as the FrontChannel signing certificate.
9. In **Response Username Field**, enter the field to extract the username from the SAML response.
10. In **Response Role Field**, enter the field to extract the role from the SAML response.
11. Click **Save**.

Fig. 8: Adding an IdP Server

12. Click **Yes** to make SAML authentication as the default authentication. Otherwise, click **No**.

Fig. 9: Select Authentication

Once you add an IdP server, **Role Mapping** is added and **Add Server** is removed in SAML Authentication management.

Fig. 10: SAML Authentication Management

4.3 Configuring Default Settings

1. Go to *Settings >> System Settings* from the navigation bar and click **Plugins**.
2. Find **SAML Authentication** and click **Manage**.
3. Click **Default Settings**.

Fig. 11: SAML Authentication Management

4. Select a Logpoint user group as the **Default Role**. SAML Authentication assigns the user group to the SAML Authentication users whose role attribute are not returned by the IdP server.
5. Click **Save**.

Fig. 12: Default Settings

4.4 Downloading Logpoint Metadata

1. Go to *Settings >> System Settings* from the navigation bar and click **Plugins**.
2. Find **SAML Authentication** and click **Manage**.
3. Click the **Download** icon from **Actions**.

Fig. 13: Downloading Logpoint Metadata

4.5 Mapping Roles

You can map a SAML role to a Logpoint user group to grant access permission in Logpoint. A SAML role can be mapped to a single Logpoint user group only. This is mandatory.

To map a SAML role to a Logpoint user group:

1. Go to *Settings >> System Settings* from the navigation bar and click **Plugins**.
2. Find **SAML Authentication** and click **Manage**.
3. Click **Roles Mapping**.

Fig. 14: Role Mapping

4. Enter a **SAML Role**.
5. Select a **LogPoint User Group** for the provided SAML role.

Fig. 15: SAML Role Mapping

6. Click **Add**.

You can view all the mapped SAML roles and Logpoint user groups in **Role Map Strategies**. You can either edit or delete them from **Actions**.

LOGIN WITH SAML AUTHENTICATION

If you have selected SAML Authentication as the default authentication, Logpoint redirects you to the IdP authorization server. You can log into Logpoint using the IdP server credentials.

To log into Logpoint using SAML Authentication:

1. On the login page, click **Other Authentication Options**.

The image shows a login interface for Logpoint. At the top is the Logpoint logo, which consists of a stylized yellow and blue icon followed by the word "LOGPOINT" in a bold, dark blue, sans-serif font. Below the logo is the text "PLEASE LOGIN TO CONTINUE" in a smaller, grey, sans-serif font. There are two input fields: the first is labeled "Username" with a grey user icon to its left, and the second is labeled "Password" with a grey lock icon to its left. Both fields have a light grey background. Below the password field is a link that says "Forgot password?" in a purple, sans-serif font. Underneath the link is a dark purple rectangular button with the word "LOGIN" in white, bold, sans-serif capital letters. At the bottom of the form is a light grey rectangular box containing a link that says "Other Authentication Options" in a grey, sans-serif font. This link is enclosed in a thin red rectangular border.

Fig. 1: Other Authentication Options

2. Select **SAML Authentication**.

Fig. 2: Login Options

3. Click **Login**.

Fig. 3: SAML Authentication

4. Log in using your IdP credentials.

Once you log in, Logpoint adds “saml_” as a prefix to your username. For example, if you log in as “bob” with SAML Authentication, Logpoint updates your username to “saml_bob.”

Fig. 4: User Logged in with SAML Authentication

MANAGE SAML AUTHENTICATION USERS

Logpoint users with User Account Administrator and Logpoint Administrator access can manage SAML Authentication users.

To manage the SAML Authentication users:

1. Go to *Settings >> User Accounts* from the navigation bar.
2. Click **Users**.
3. In **Plugin Users**, click **SAML Authentication**. It lists all the SAML Authentication users who have logged into Logpoint.

Fig. 1: Plugin Users

4. Click the **De-Activate User** icon in **Actions** to deactivate a user.
